

I am requesting that you consider voting down NAB's petition 04-160. Even though my area is not provided by XM Instant Traffic & Weather, I hope that someday it will be available. With satellite radio, I can receive signals that are clear and concise, as opposed to AM/FM signals that do not come in clearly. With a format of satellite radio, I can get updates about traffic and weather and prepare accordingly to any situation. The AM/FM signals come in & out where as I can miss important information. I am willing and able to pay for these services for which I think are outstanding. Once again I urge you to reject the petition.
